Cotton Quality - United States  
1980 Crop

Introduction

Upland cotton ginned from the 1980 crop contained the largest proportion of grade 31 and higher white grades in seventeen years, according to the Cotton Division, Agricultural Marketing Service, USDA. White grades 31 and higher represented over 25 percent of ginnings. The average staple length was 34.0 thirty-seconds inches, the second longest on record. Cotton in the lengths 34 and longer comprised over 68 percent of ginnings. The 1980 crop contained the largest proportion of cotton in the mike 35-49 range in seven years. Average fiber strength was 90,500 pounds per square inch, the strongest on record. Average strength in grams per tex was 24.0.

Grade. White grades 31 and higher made up over 25 percent of upland ginnings from the 1980 crop. This was the largest proportion in the higher white grades since 1963 and compares with 24 percent last season and 13 percent in 1978. Grade 31 comprised over 24 percent of ginnings from the 1980 crop. This was the largest proportion of grade 31 in any crop since 1963 and was the first time since 1961 that grade 31 was the predominant quality. Grade 41 has been predominant in recent years. Grade 41 made up 22 percent of ginnings in 1980, the smallest proportion since 1961. White grades comprised almost 66 percent of the 1980 crop, down from 67 percent and 69 percent in 1979 and 1978, respectively. Light Spotted grades made up 27 percent of ginnings compared with 28 percent the two previous years. Spotted grades accounted for almost six percent of the 1980 crop against four percent a year earlier and two percent two years ago.

Staple. The average staple length of the 1980 upland cotton crop was 34.0 thirty-seconds inches, the second longest since records began in 1940. This compares with 33.9 in 1979 and 33.7 in 1978. The 1974 crop was the longest on record at 34.2 thirty-seconds inches. Staples 36 and longer made up almost 22 percent of the 1980 crop, the same as the record high established in 1979 and up from 10 percent in 1978. The medium lengths, staples 34 and 35, comprised almost 47 percent of ginnings, compared with 41 percent a year earlier and 54 percent two years ago. Staples 32 and 33 accounted for 18 percent of the 1980 crop, the smallest proportion since 1975. This compares with 21 percent in 1979 and 23 percent in 1978. Cotton with staples 31 and shorter made up almost 14 percent of the 1980 crop against 16 percent a year earlier and 13 percent two years ago.

Mike. Cotton with mike 35-49 made up 80 percent of the 1980 crop. This was the largest proportion of cotton in this mike range since the crop of 1973 and compares with 67 percent last season and 77 percent two years ago. Cotton miking 34 and lower accounted for almost 10 percent of the 1980 crop against 28 percent in 1979 and 11 percent in 1978. Cotton with mike of 50 and higher also accounted for 10 percent compared with six percent a year earlier and 12 percent two years ago. The average mike of the 1980 crop was 43 against 40 a year earlier and 42 in 1978.

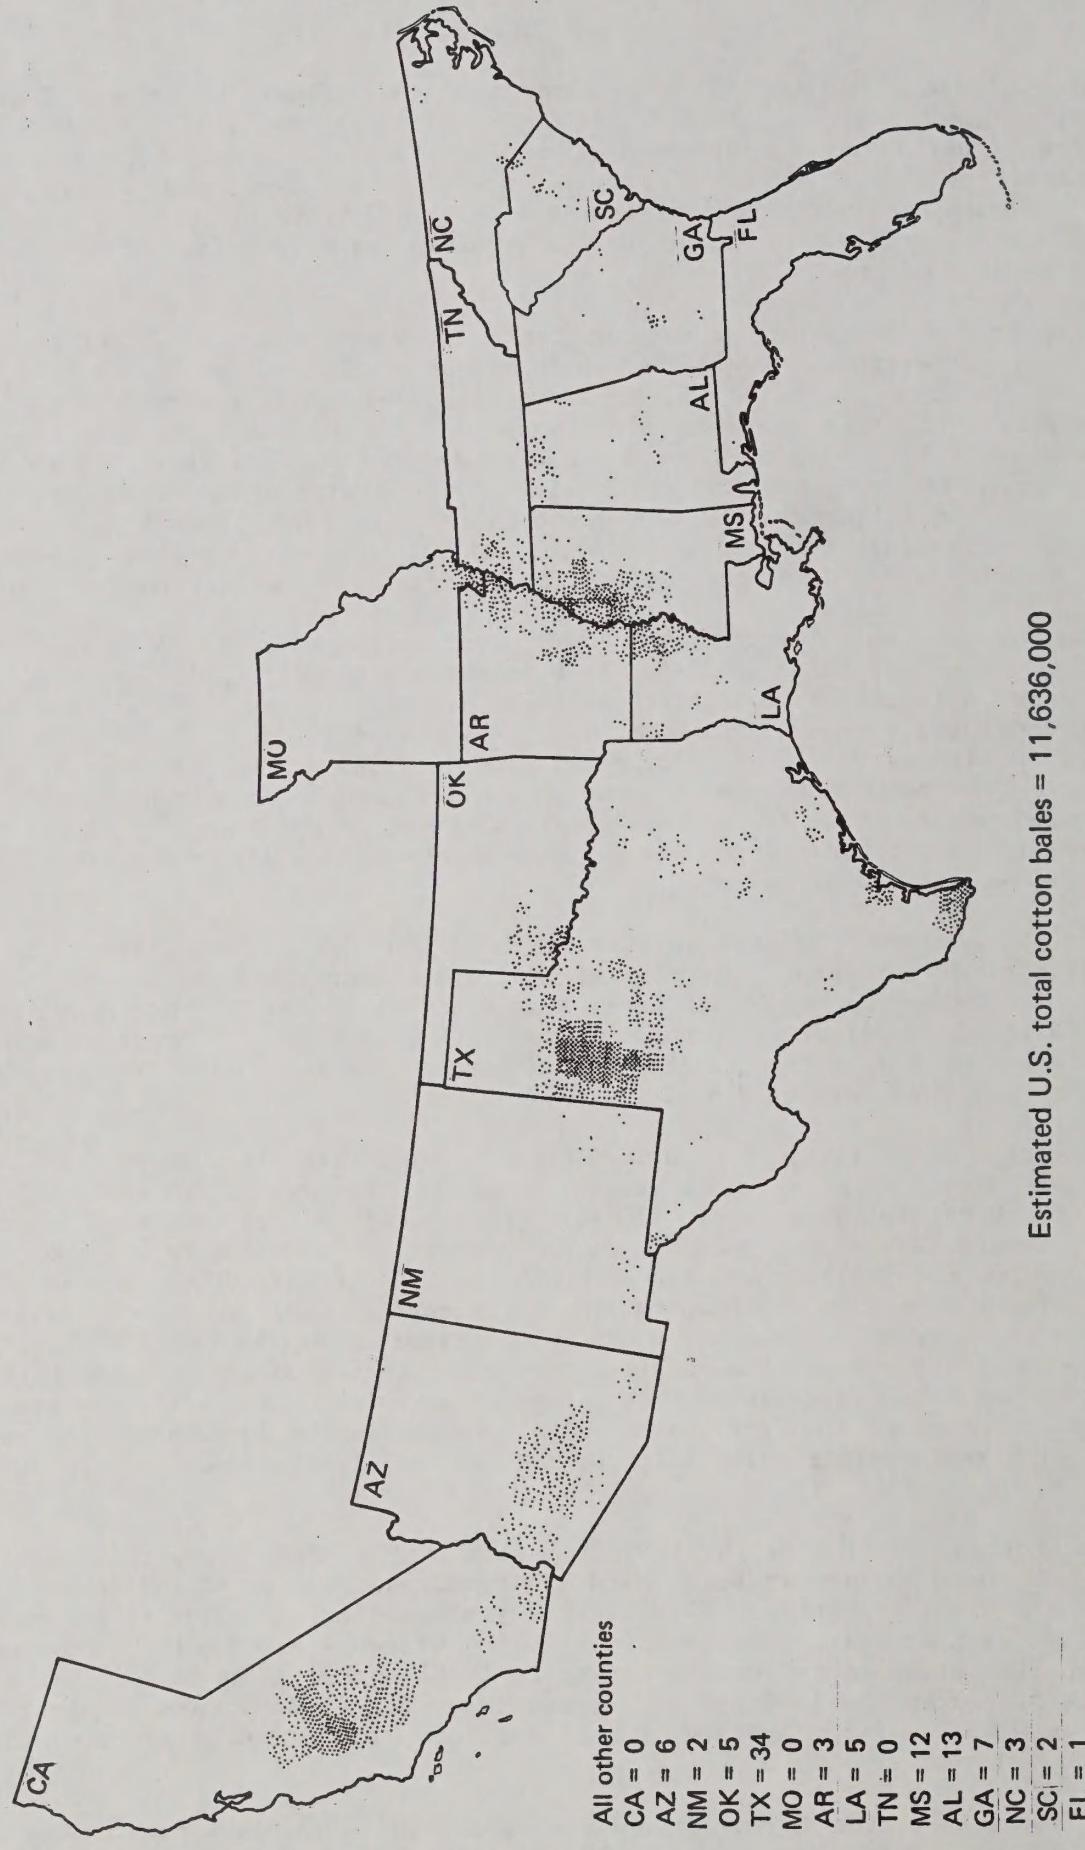

Strength. Average fiber strength of upland cotton ginned from the 1980 crop was 90,500 pounds per square inch (psi), the strongest fiber since records began in 1966. This compares with 86,700 psi the previous season and 88,300 psi two years ago. Almost 55 percent of the crop showed a fiber strength of 90,000 psi or stronger, up from 29 percent in 1979 and 38 percent in 1978. This was the largest proportion in the stronger groups on record. Cotton with strength of 80,000 to 89,000 psi accounted for 43 percent of this season's ginnings, down from 60 percent and 57 percent in 1979 and 1978, respectively. This was the smallest proportion in this category since 1967. Fiber strengths of 79,000 psi and lower made up less than three percent of the crop, the smallest proportion on record and compares with 11 percent a year earlier and five percent two years ago. The average strength of upland cotton in grams per tex was 24.0 with 31 percent of ginnings in the 22-23 range and 27 percent in the 24-25 grams per tex range. About 16 percent of the crop had strength below 22 grams per tex and almost 27 percent was stronger than 25 grams per tex.

American Pima cotton ginned from the 1980 crop contained a larger proportion of the longer staples than last season but a smaller proportion of the higher grades. Staples 46 and longer accounted for 95 percent of this season's ginnings, up from 82 percent a year earlier. Staples 44 and shorter made up about five percent in 1980 against nearly 18 percent in 1979. Grades 4 and higher accounted for 88 percent of the 1980 American Pima crop, down from 93 percent in 1979. Grade 3 was the predominant grade both years and accounted for 50 percent in 1980 and 63 percent in 1979. Grade 5 made up eight percent in 1980 against four percent a year earlier. Average mike of American Pima cotton ginned from the 1980 crop was 38 compared with 39 last year.

Ginnings of 1980-crop cotton in the United States totaled 10,824,200 running bales, according to the Bureau of the Census. This total includes 10,722,200 bales of upland and 102,000 bales of American Pima cotton. The average net weight per bale of cotton ginned from the 1980 crop was 492.9 pounds.

# U.S. Cotton Production

Each dot represents 5,000 bales of cotton ginnings  
from average of 1976 through 1978
